Version Info:

Firmware for SG2210MP(UN) 5.0. This firmware is fully adapted to Omada Controller V5.14.

New Features:

1. Add support for showing port types as tagged or untagged when using the command “show vlan brief”

2. Add support for displaying port description in the log for link up/down events.

Bug fixed:

1. Fixed the issue with LAG port SNMP QBridge FDB table information reporting abnormally.

2. Fixed the issue where IPv6 ND detection encounters errors when deploying via CLI template in controller mode.
3. Fixed the 802.1x authentication issue in scenario where an IP Phone is connected to a PC NIC, and PoE is disabled and re-enabled.
