Version Info:

Firmware for SG3428 (UN) 2.30. This firmware is fully adapted to Omada Controller V5.14.

New Features:

1. Add support for showing port types as tagged or untagged when using the command “show vlan brief”.

2. Add support for displaying port description in the log for link up/down events.

Bug fixed:

1. Fixed the issue with LAG port SNMP QBridge FDB table information reporting abnormally.
2. Fixed the 802.1x authentication issue in scenario where an IP Phone is connected to a PC NIC, and PoE is disabled and re-enabled.
